1. A Few Quick Facts

Cloud Sourcing: Five Properties

Three Main Service Models ■

Technical overview:

Examples ■

Rackspace Cloud
the open cloud company
NOW AVAILABLE
RACKSPACE CLOUD BLOCK STORAGE
POWERED BY OPENSTACK
Consistent performance for demanding apps
Free I/O. Choice of SSD or standard volumes.

GoGrid
Complex Infrastructure Made Easy™
PRODUCTS SOLUTIONS SUPPORT PARTNERS ABOUT US SIGN UP

WE MAKE CLOUD INFRASTRUCTURE EASY. REALLY EASY.

CLOUD HOSTING
The easiest way to deploy complex infrastructure.

DEDICATED HOSTING
Innovative options to power flexible dedicated/cloud architectures.

PRIVATE CLOUD
Leverage the benefits of cloud computing plus physical resource separation.

GoGrid Cloud Hosting See for Yourself

G. Vossen: Breathing in the Clouds

Marketplace for IaaS Products ■

The screenshot shows the SpotCloud website interface. At the top, there is a navigation bar with a language selector (Sprache auswählen), links to DOCS, APP DIRECTORY, and MARKETPLACE LOGIN, and a main menu with links to Buyers, Sellers, Technology, FAQ, and Private SC. The SpotCloud logo, labeled 'PUBLIC BETA', is prominently displayed with the tagline 'Best Providers. Best Price.' Below the logo, a banner features a globe icon and the text: 'SpotCloud is the World's First Global Market for Cloud Capacity. Buy and sell computing capacity globally based on price, location, and quality, on a fast and secure platform.' The main content area is divided into two columns. The left column is titled 'Buy Capacity' and includes the subtext 'Find the *best providers* at the *best price*'. It describes SpotCloud as the world's best place to buy cloud servers, offering the broadest choice of precise geo-targeted capacity at the best price. At the bottom of this column is a button labeled 'Browse The SpotCloud Market (Free Signup)'. The right column is titled 'Sell Capacity' and includes the subtext 'Sell Your Data Center Capacity Globally'. It describes SpotCloud as a powerful channel to increase utilization and drive new revenue, allowing users to easily sell idle server capacity with instant access to global markets. At the bottom of this column is a button labeled 'Request To Become a Capacity Provider'.

Cloud Broker ■

The screenshot shows the CompatibleOne website. The header features the CompatibleOne logo, an OpenStack logo, and the text "Federate Open Cloud Resources". Navigation links include Home, Discover, Develop, Follow, and About. A search bar and social media icons are also present. The main content area is titled "CompatibleOne: the first real Open Cloud Broker" and describes the platform's capabilities and benefits. A quote from Parviz Peiravi, Principal Architect at Intel Corporation, is included. An image on the right shows keys and a sign that reads "CompatibleOne is your passkey against vendor lock-in".

CompatibleOne & openstack Federate Open Cloud Resources

Home Discover Develop Follow About ▾

search...

CompatibleOne: the first real Open Cloud Broker

CompatibleOne offers a simple and unique interface allowing for the description of user cloud computing needs, in terms of resources, and their subsequent provisioning on the most appropriate cloud provider.

Resource descriptions may cover the complete cloud computing paradigm ranging from complete applications (SaaS), through development platforms (PaaS) down to low level compute and storage defined infrastructure (IaaS).

CompatibleOne provides a unique language for the description and management of an unlimited number of cloud service providers.

The immediate benefits are:

- Centralized description of all your cloud computing needs in terms of resources
- Rapid selection of the most appropriate provider
- Full automation of the provisioning and the migration process of your resources
- Elimination of any form of vendor lock-in and permit full interoperability
- Monitor and control the service delivery quality of your cloud providers

"Since the IT industry is rapidly adopting service based business models, there is a substantial and growing need for solutions that can reduce the complexity involved in delivering federated business services and can handle the challenges of managing a distributed infrastructure. This is where I believe CompatibleOne cloud service broker provides a unique value – their solutions' ability to address both needs paves the way for building a new generation of IT Infrastructure." *Parviz Peiravi, Principal Architect - Intel Corporation.*

[Contact sales](#) for enterprise level support? - or - [Try it now](#)

Build your business on Google Cloud

Google Cloud Platform allows you to build, run, and manage your applications, websites, store and analyze data

[Try it now](#) - or - [Need enterprise level support?](#)

Scale your app

Take advantage of the speed and scale of the same infrastructure that powers Google's applications.

Focus on business

Let us deal with capacity planning, center infrastructure, and other IT issues so you can focus on your business.

IBM SmartCloud

[Overview](#)

[Private Cloud](#)

[IaaS](#)

[PaaS](#)

[SaaS](#)

[Consulting](#)

Reinventing application development

IBM's platform as a service (PaaS), IBM SmartCloud Application Services, is included with, runs on and automatically deploys virtual resources to IBM SmartCloud Enterprise (IaaS). SmartCloud Application Services delivers a secure, collaborative, integrated cloud environment that supports the full lifecycle of accelerated application development, deployment and delivery.

Deploy a new app during lunch hour and still have time for lunch

- Get web applications to market faster
- Enjoy middleware as a service
- Develop and test application patterns

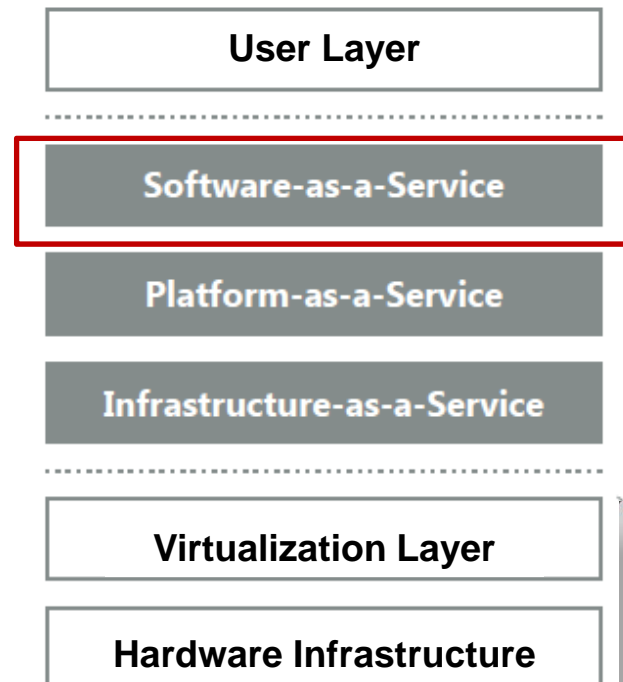

IBM SmartCloud Services Trial. No charge. End-to-end cloud application development just got a whole lot easier. Experience the power of IBM public cloud infrastructure and platform services with this 90-day trial.

G. Vossen: Breathing in the Clouds

Three Main Service Models ■

Technical overview:

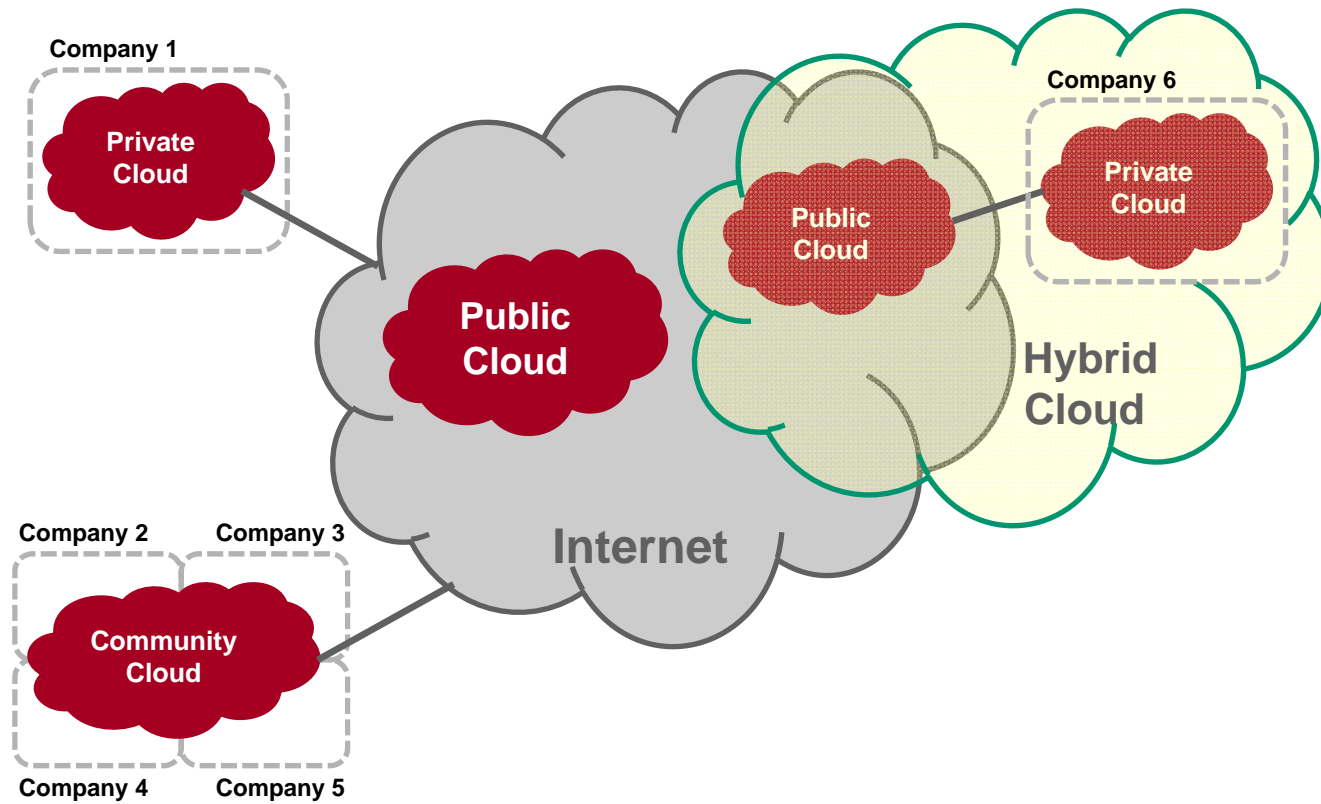

The “Cloud Washing” Problem ■

from www.theknowlist.com

Four Modes of Cloud Operation ■

Cloud Benefits ■

- Economies of scale w.r.t. hardware and software
- Easy accommodation of demand fluctuations
- No local installations w/ upgrades, patches, service packs, etc.
- End of inefficient utilization of server resources
- No big upfront investments
- Extensive technical support
- Continuous participation in technological advances
- “Pay-as-you-go” business model (as known from other commodities, e.g., water, electricity)

So what makes it so popular for individuals? ■

- **No manual backups**
- **Automatic service maintenance**
- **Alerts about almost anything (if you want)**
- **Cheap pricing (e.g., for music)**
- **Better selectivity (e.g., for albums)**

Source:
<http://images.computerwoche.de/images/computerwoche/bdb/1817240/890.jpg>

2. Bright Spots in the Cloud

G. Vossen: Breathing in the Clouds

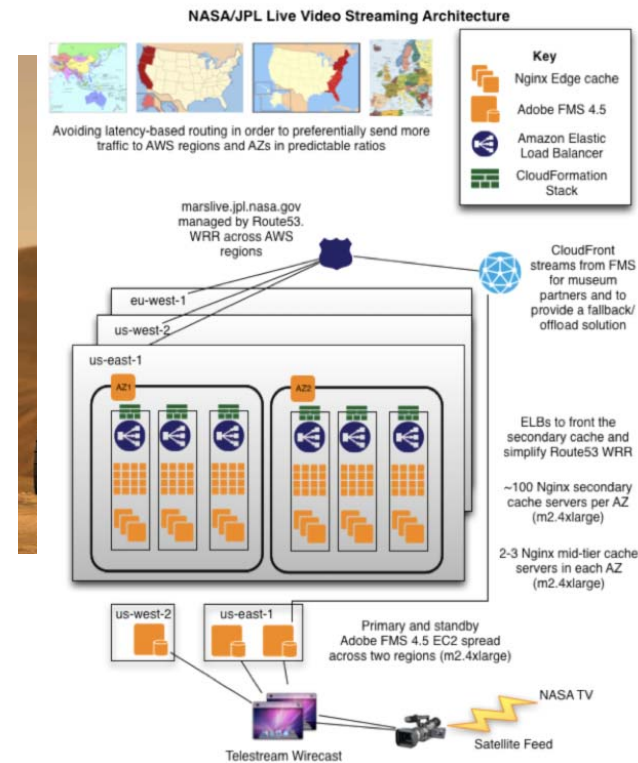

NASA JPL – Landing of Mars Rover “Curiosity” ■

■ Landing in August 2012

- Broadcast via live stream
- 3+ M viewers

■ Based on Adobe as well as AWS products for

- Streaming
- Monitoring & provisioning of additional infrastructure
- Content delivery & load balancing

- **Netflix: “Watch TV shows & movies anytime, anywhere. For one low monthly price.”**
 - Runs movie rental and on-demand streaming to 30+ M customers
 - In 2011 responsible for approx. 1/3 of the entire US downstream traffic
 - Data centers still not their core competency
 - Therefore moved to AWS in 2008
- **Why Amazon? Can provide the power and scalability that Netflix requires**
- **What is done in the cloud?**
 - Transcoding (2009), Streaming (2010)
 - Own products as PaaS based on AWS

NASDAQ OMX® – Market Replay ■

■ Stock exchange info for replay and analysis, allowing users to view consolidated quote and trade data

- Replay data is available intraday as soon as 15 min after it occurs
- 1+ PB of compressed trading data, adding 50+ GB every day

■ Storage is using Amazon S3

- Each object contains 10 min of trading data per share
- Access application is based on Adobe AIR using Data-on-Demand API

■ Advantages achieved by cloud exploitation

- Cost reduction
- Shorter Time-to-Market (1/3 of what it was before)

Customers include

- KLM Royal Dutch Airlines
- Well Fargo Bank
- Spotify
- OpenTable
- Hire A Hubby
- Chipotle Mexican Grill
- Caesar's Entertainment
- Vodafone

Wheelz example:

- Australian company connecting people that need to use a car to car owners who are willing to lend theirs for an hourly rate

Wheelz uses Desk.com

- to manage new leads, existing customer relationships, and strategic initiatives, and
- to track every customer touch point from initial sign up to the most recent rental experience

- **A startup from the University of Münster, winner of the ERCIS Launch Pad 2010**
- **An intelligent, personal assistant for the automatic management of all paper-based as well as digital documents in a single system**
- **Complete and digital file cabinet**
- **<https://www.fileee.com/>**

Source: <http://coakley-baker.com/downloadah/part8/images/intoThinAir.jpg>

3. What Makes the Air Thin

G. Vossen: Breathing in the Clouds

- **SMEs cannot afford a private cloud, so they need to go public**
- **Yet they are insufficiently prepared**
- **They are afraid of (among others)**
 - Preparation overhead
 - Storing data in the cloud
 - Trusting the CSP
 - Provider lock-in
 - Complexity of migration

Tedious Service & Provider Selection ■

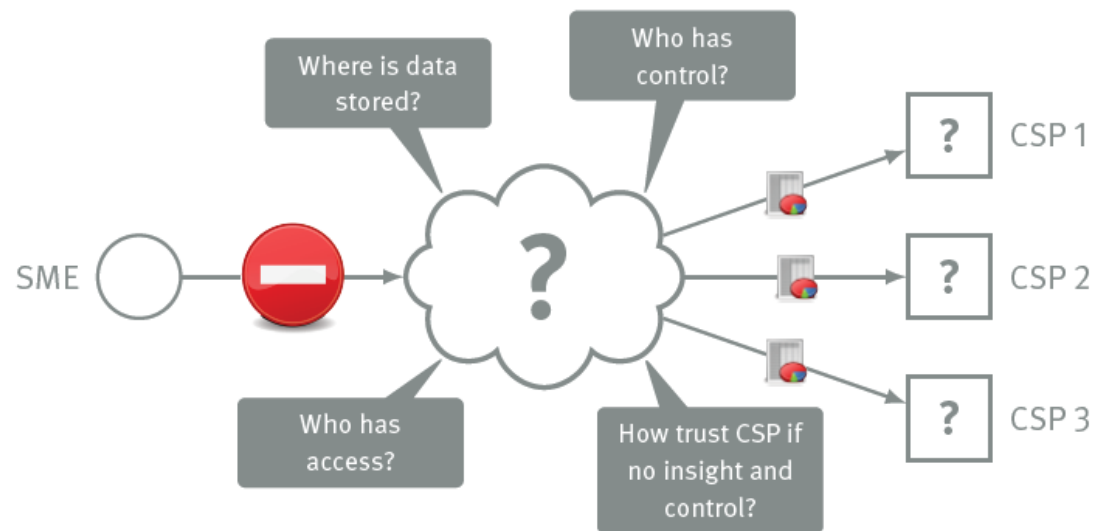

High up-front selection overhead, e. g.:

- Identify viable cloud services
- Scrutinize services and providers
- Find optimal implementation

Lack of Trust in the Cloud ■

SMEs lack trust in cloud services:

- Lack of trust in technical security of CSPs
- Lack of trust in governance over CSPs
- Lack of trust in legal framework for cloud usage

2010 Study among German SMEs ■

Rank	Prerequisites for using SaaS	\bar{x}	N	$SE_{\bar{x}}$
1	Confidentiality of data with respect to 3rd parties	4.95	40	.03
2	Permanent availability of the software	4.63	40	.11
3	Confidentiality of data with respect to CSP	4.50	40	.16
4	CSP has clearly defined backup strategy	4.40	40	.15
5	Performance of the software (no latency during use)	4.38	40	.13
6	Stable prices for service usage	4.10	40	.14
7	Usability resembles traditional desktop applications	4.03	40	.19
8	Possibility of complete data export (e. g., database dump)	3.97	39	.18
9	Guaranteed geographical limits for cloud service	3.51	37	.28
10	Possible integration into existing non-SaaS software	3.42	38	.23
11	Possibility of changing the CSP	3.37	38	.23
12	Custom SLAs	3.28	39	.18
13	CSP is located in Germany	2.97	37	.23
14	Possible integration into other SaaS software	2.88	40	.21
15	Possibility of local installation of the SaaS software	2.87	39	.23
16	CSP is located in the EU	2.62	34	.25
17	CSP has the Safe Harbor seal	2.41	27	.26
18	CSP has the PrivacyMark seal	2.36	25	.29
19	CSP is certified according to ISO/IEC 27001	2.26	31	.27
20	CSP is certified according to SAS 70	1.80	30	.26

Study, cont'd ■

Rank	Reason for not using SaaS	\bar{x}	N	$SE_{\bar{x}}$
1	SaaS does not work well with other software	3.63	38	.20
2	Loss of control over access to data	3.59	39	.23
3	Data Migration from existing application too tedious	3.56	39	.23
4	High latency when using software (page loads)	3.44	39	.25
5	Less control over backups of data	3.41	39	.22
6	SaaS software lacks some desired features	2.97	35	.25
7	Permanent broadband Internet connection required	2.92	38	.29
8	Usability of web application worse than desktop application	2.63	38	.26
9	Lack of acceptance among employees	2.58	38	.25
10	Pay-per-use is not attractive	2.49	35	.25
11	Technical implementation too much effort	2.15	39	.23
12	Restrictions from existing contracts	2.14	37	.21
13	Benefits of SaaS are not seen	2.03	37	.26
14	Previous CAPEX has to be amortized first	1.97	38	.23

in Proc. 12th Int. Conf. on Web Information System Engineering (WISE),
October 2011, Sydney, AU

The Good News: SMEs, you're not alone! ■

- Check the provider's reputation

- Check which SLAs can be specified
- Check the price models offered
- Check the controlling options

Run Your Business in the Cloud

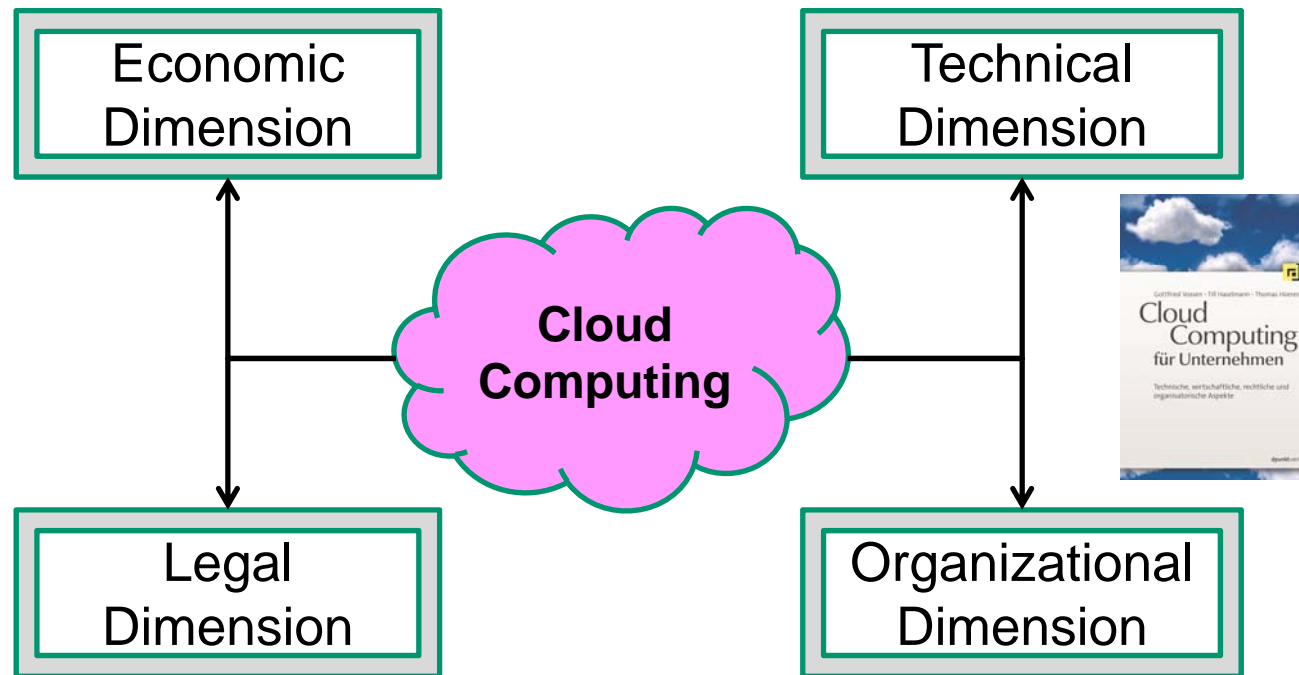

Got
questions?

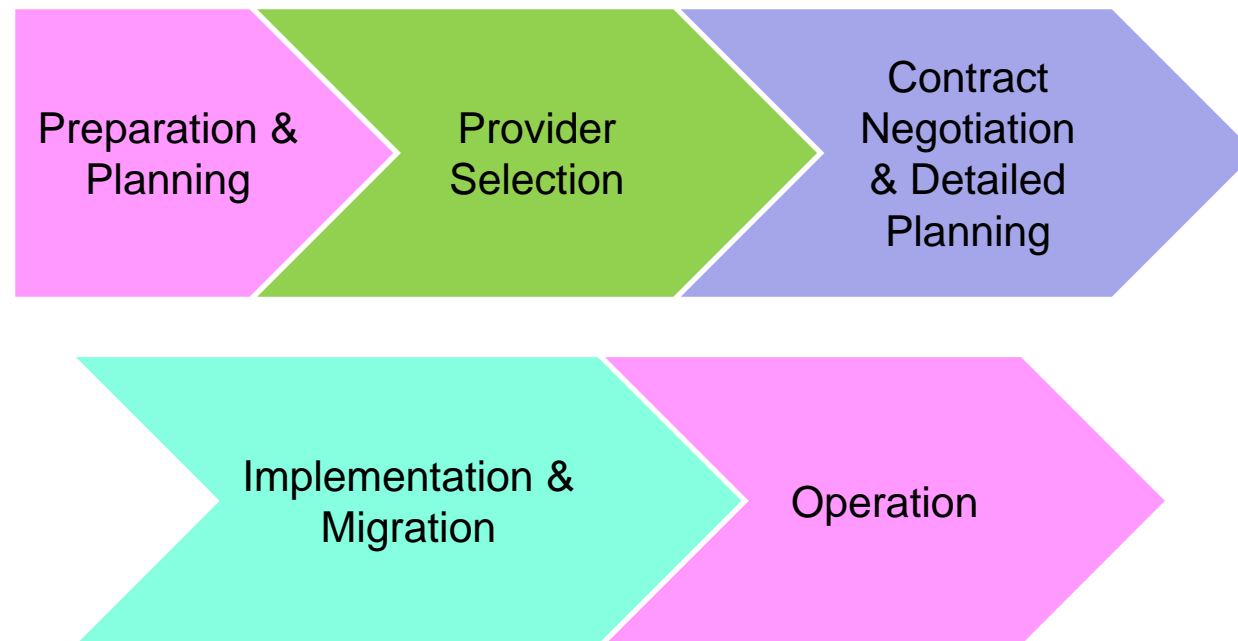

G. Vossen: Breathing in the Clouds

The Cloud is not reversible, so what can we do? ■

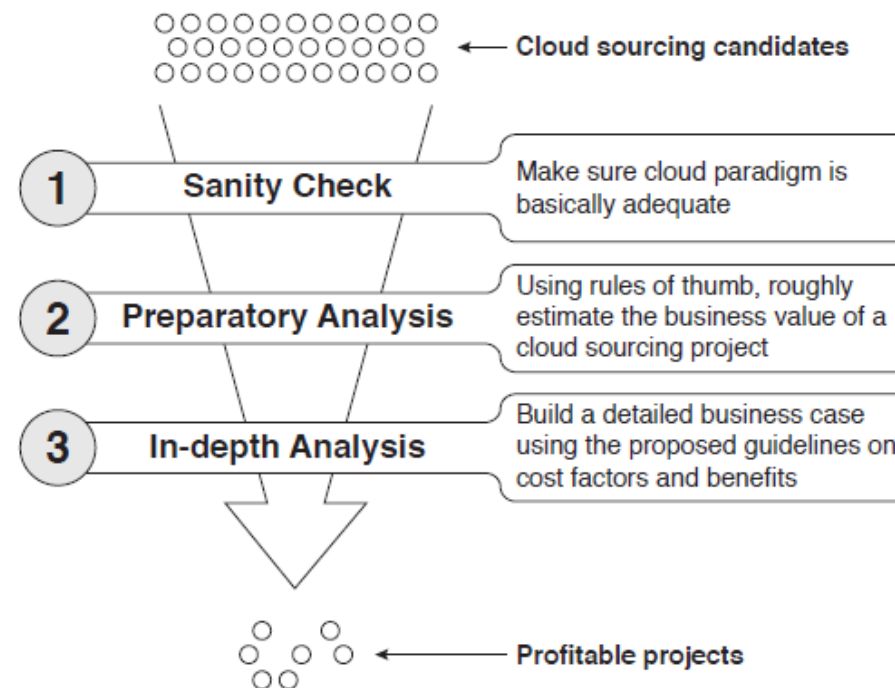

- **Strategy development considering four major dimensions**
- **Structured provider selection**
- **Cloud intermediaries**
- **CCO introduction**
- **Employ monitoring tools such as CloudSleuth or CloudHarmony**
- **Service-level agreements (SLAs)**

The Four Dimensions ■

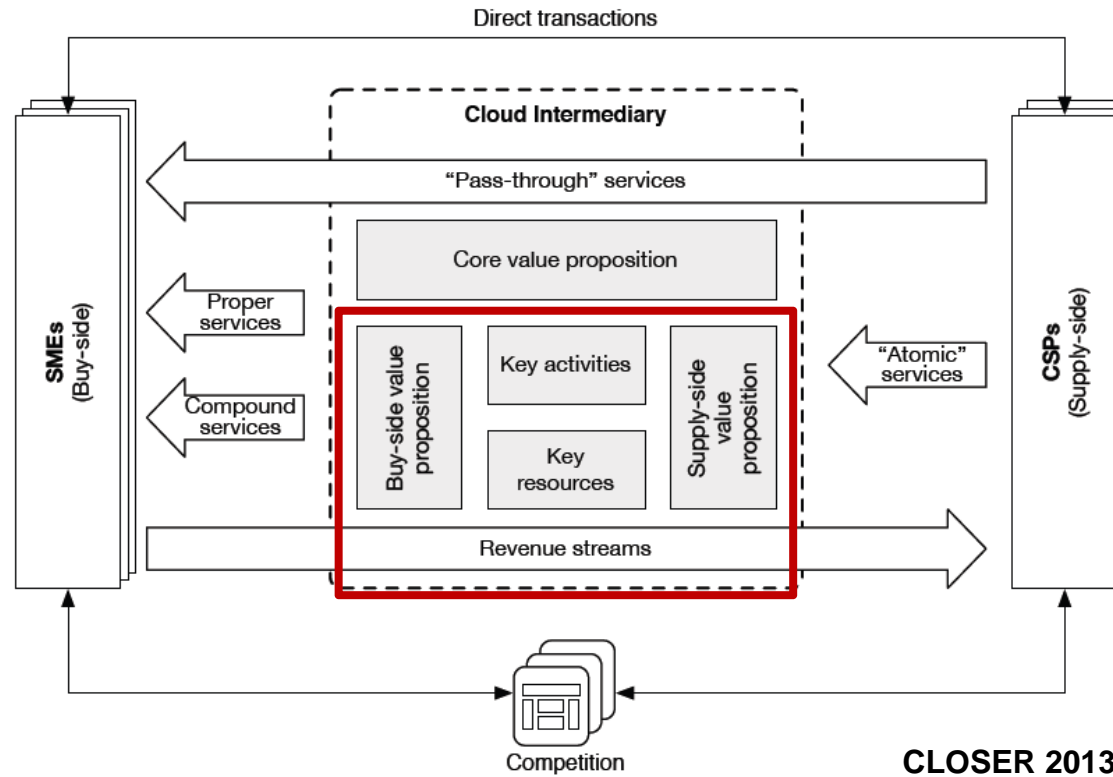

For Step 1: EVACS Method ■

EVACS = Economic Value Assessment of Cloud Sourcing → CloudAsia 2013

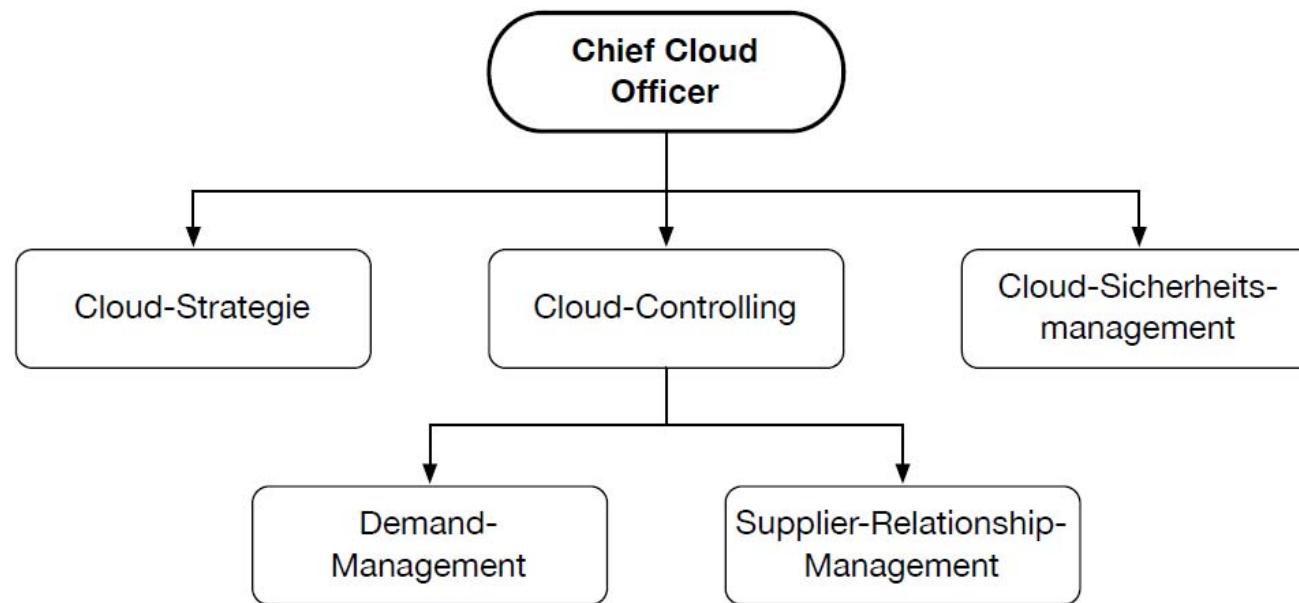

G. Vossen: Breathing in the Clouds

(Buy-Side Hybrid) Cloud Intermediary ■

CLOSER 2013

The New CCO Role ■

Source:
<http://news.newclear.server279.com/wp-content/uploads/2010/03/bad-air.png>

4. What Makes the Atmosphere Bad

G. Vossen: Breathing in the Clouds

The “Cloud Washing” Problem, cont’d ■

A survey by Six Degrees Group has found that

- 45% of **IT decision makers** feel that ‘cloud-washing’ by marketing departments at technology brands is an increasing problem;
- 83% feel that cloud service providers could do more to demystify the cloud;
- 82% of IT decision makers say that their cloud-computing provider is not listening to them;
- 51% of **business decision makers** believe that technology companies are guilty of using too much jargon, compared to 24% for Government, 16% for bankers and only 9% for lawyers.

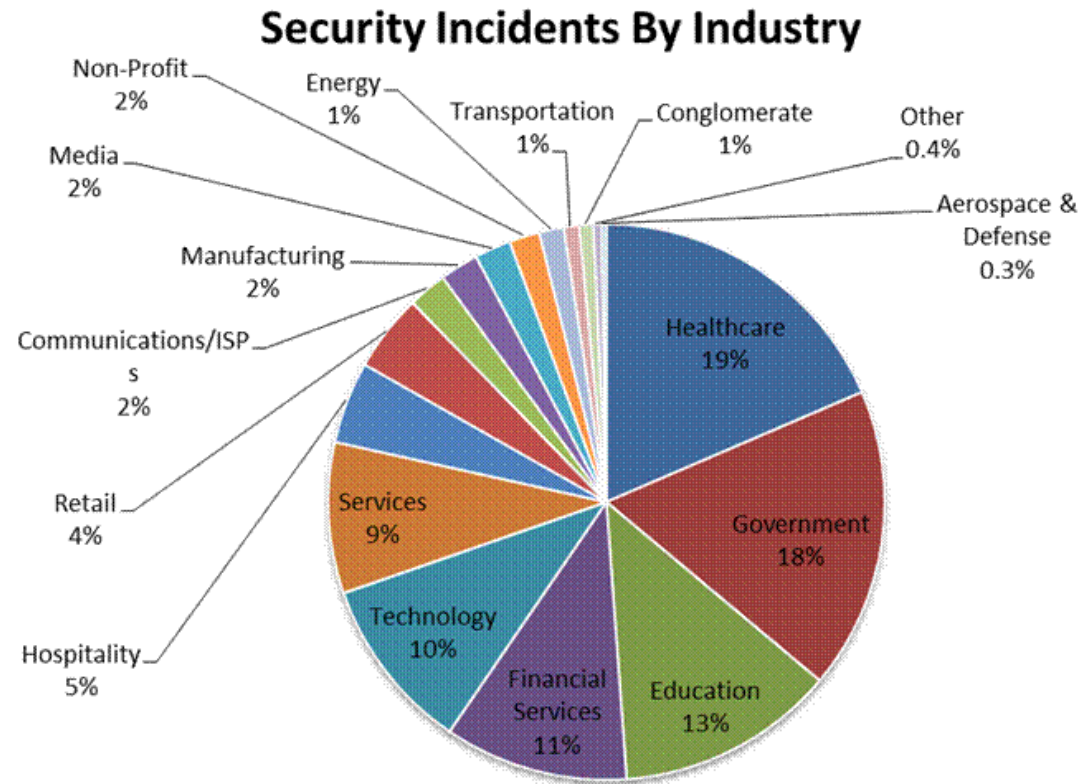

from www.theknowlist.com

■ Aberdeen Group study, February 2013: data losses reported by SaaS users:

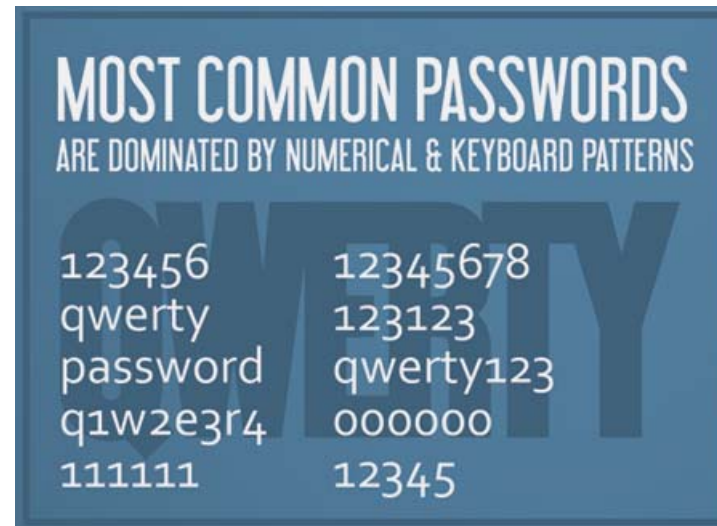

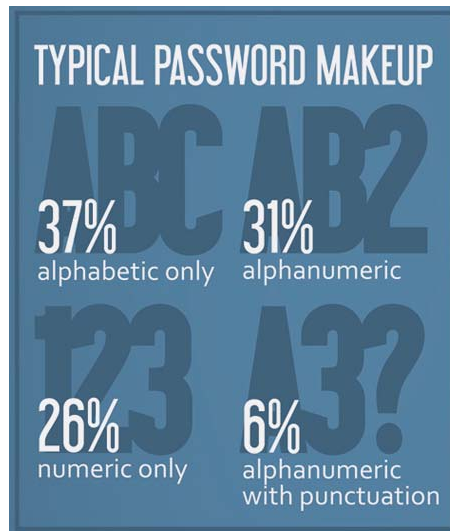

Security Issues: Theft, Exposition, Leakage ■

- A hacker stole the names, birthdates and possibly credit-card numbers for 77 M people who play online videogames through Sony's PlayStation console, April 2011
- Online shoe store Zappos hacked, January 2012, exposing the names, e-mail addresses, addresses, phone numbers and partial credit card numbers of 24 M customers
- Data leakage at LinkedIn and Last.fm, Summer 2012; passwords easily computable due to simple hashes
- Data leakage at Dropbox, July 2012 customer data stolen from the dropbox of an employee

What Studies Show ■

- **61% of users reuse passwords across multiple services and 44% of consumers change their password at most once a year (CSID Consumer Survey 2012)**

- **90+ % of user-generated passwords are vulnerable to hacking, according to a Deloitte report, January 2013**

G. Vossen: Breathing in the Clouds

- **Applicable laws vary from one country to the next**
- **In Germany alone, cloud users and CSPs need to consider**
 - Telekommunikationsgesetz (TKG)
 - Bundesdatenschutzgesetz (BDSG)
 - Strafgesetzbuch (StGB)
 - Abgabenordnung (AO)
 - Versicherungsaufsichtsrecht (VAG)
 - Betriebsverfassungsgesetz (BetrVG)
- **Most critical: protection of personal data**
- **What is the CSP willing to sign a contract about?**

Source:
<http://telcocloudforum.files.wordpress.com/2013/02/telco-cloud.jpg>

5. What the Cloud Enables

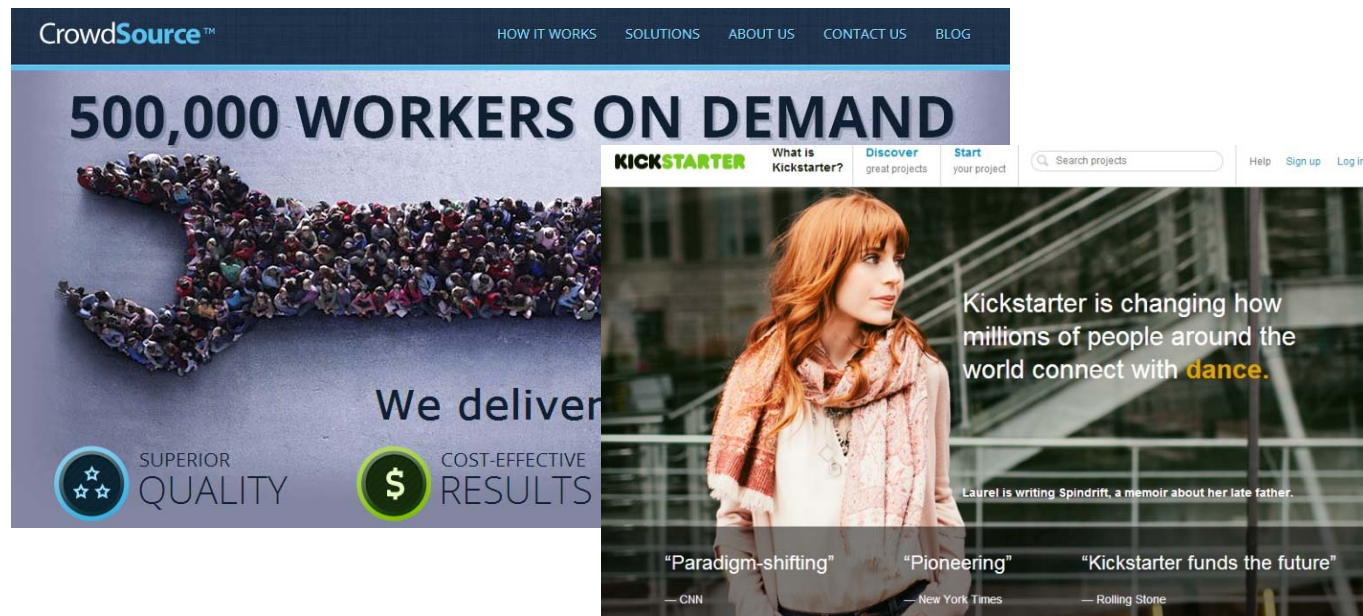

What the cloud enables, cont'd ■

- **Crowdsourcing, crowdfunding**
- **Health care – big time**
- **Public security – Boston Marathon example**
- **Traffic management**
- **Energy management**
- **Smart homes**
- **Marketplaces for data**

... to mention just a few areas and applications

Crowdsourcing, crowdfunding ■

■ New ways of working, developing ideas, funding projects

G. Vossen: Breathing in the Clouds

— If you think crowdsourcing isn't serious business ■

- **Projects exploring the potential of hybrid human/computer systems for database query processing:**
 - CrowdDB (UC Berkeley)
 - Qurk (MIT)
 - sCOOP (UC Santa Cruz)

- **Idea is that human workers can perform query operations such as subjective comparisons, fuzzy matching for predicates and joins, entity resolution, etc. These extensions can greatly extend the usefulness of a query processing system.**

■ **Clouds Against Disease**
computational platform
run by **Molplex,**
Newcastle University, and
Microsoft Research

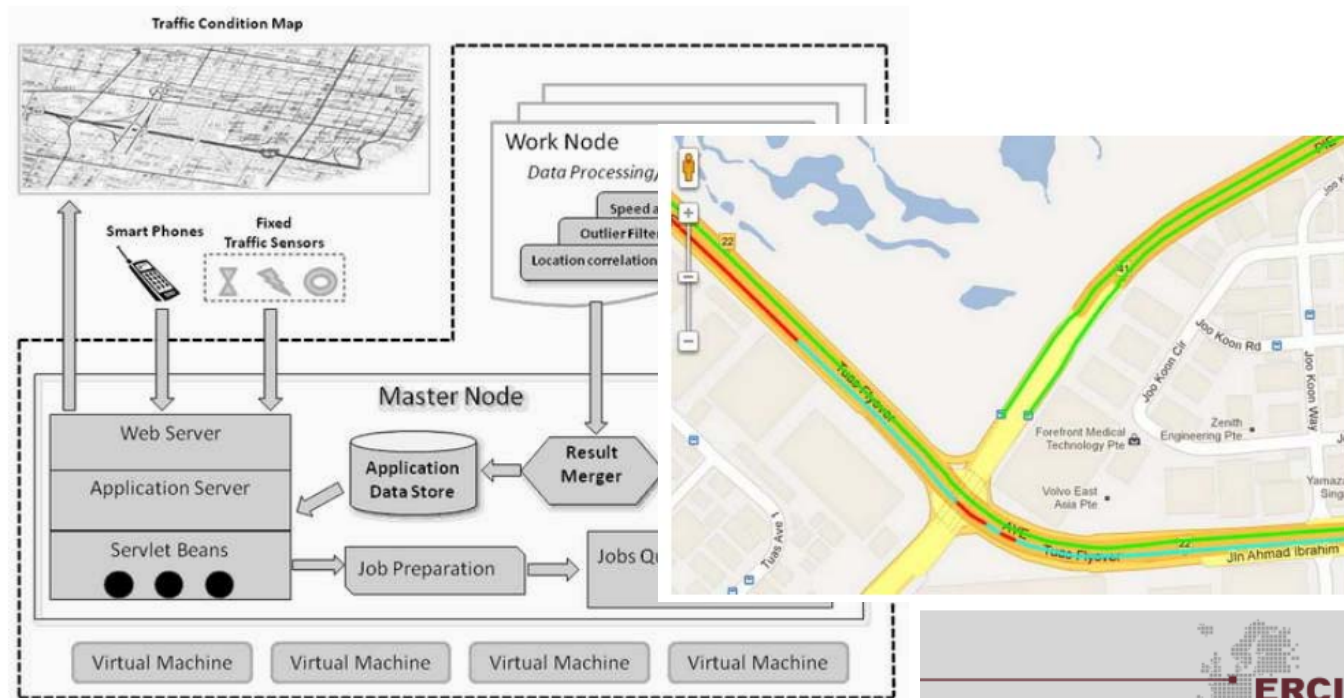

Across the globe, Molplex is helping scientists reduce the time and cost of screening large data sets of chemical compounds to identify potential drugs. Researchers are using automated tools in

Indication	Target	Partner	PRECLINICAL			CLINICAL		
			Hit Development (Activity & ADME-Tox)	Lead Optimisation (Activity & ADME-Tox)	Lead Optimisation (Biology & ADME-Tox)	PHASE I	PHASE II	PHASE III

G. Vossen: Breathing in the Clouds

Data Marketplace Outline ■

**Source: Muschalle, Stahl, Löser, Vossen: Pricing Approaches for Data Markets;
Proc. BIRTE 2012**

G. Vossen: Breathing in the Clouds

Other Developments ■

- **ERTICO – Intelligent Transport Systems and Services for Europe**
- **E-Health (23andme, Fitbit)**
- **Big data processing in social media (e.g., Twitter index)**
- **Germany's energy u-turn, i.e., the decision to phase out nuclear power by 2022**

Source:
<http://images.computerwoche.de/images/computerwoche/bdb/1844691/890.jpg>

6. A Forecast

G. Vossen: Breathing in the Clouds

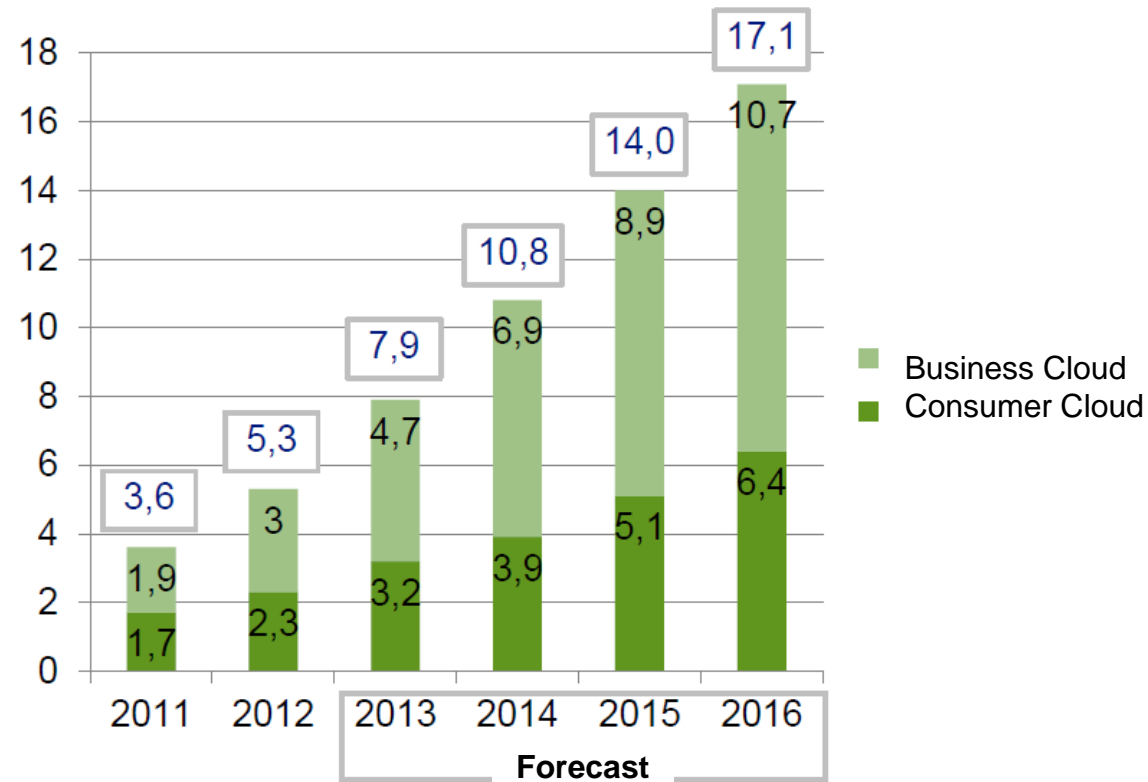

What Happens in an Internet Minute?

And Future Growth is Staggering

Sales Volume of Cloud Computing in Germany ■

■ **Heavy investing by public funding agencies**

- BMWi's Trusted Cloud Program: www.trusted-cloud.de/
- TRESOR, CLOUDwerker, SensorCloud, cloud4health in Germany
- Cloud Control in Sweden
- VERDIKT in Norway
- Andromède in France
- NSF, USA

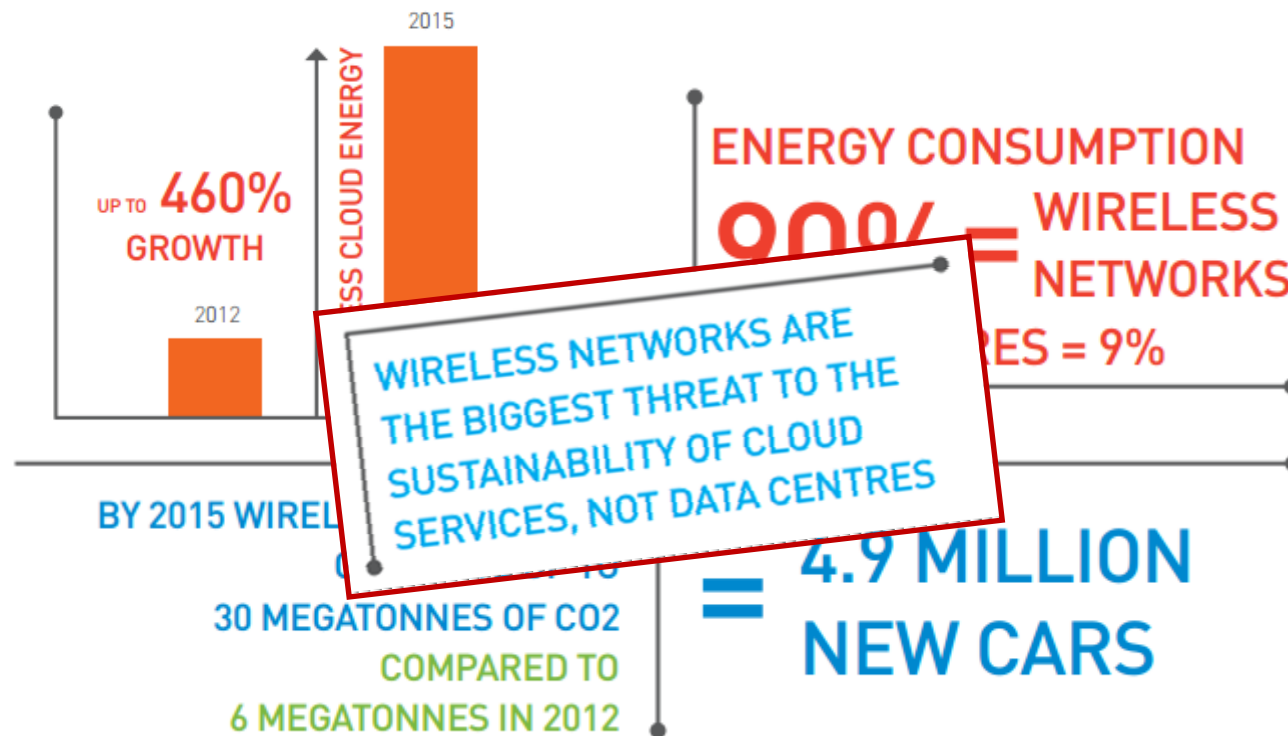

■ **Government initiatives such New Zealand's Cloud First Strategy**, an all-of-government approach to cloud computing (similar to the G-Cloud in the UK)

Trends (not an exhaustive list) ■

- The personal cloud, where business and leisure meet, will get bigger thanks to BYOD and COPE
- Cloud interoperability, portability
- Cloud standards for configuration, management, security, storage, communication

 Data Portability	 Standards	 Ease of Migration & Deployment	 Developer Choice
How can I keep control over my data?	What technology standards are important for Cloud Platforms?	Will your Cloud Platforms help me migrate my existing technology investments to the cloud?	How can I leverage my developers' and IT professionals' skills in the cloud?
Customers own their data and Cloud Platforms should make it easy and efficient to securely move customers data in and out.	Cloud Platforms should reuse existing and commonly used standards when appropriate and may lead to the creation of new standards where existing standards are not sufficient.	Cloud Platforms should provide, for existing technologies that are appropriate to the cloud, a migration path that preserves, in a secure way, existing investments in applications and IT resources.	Cloud Platforms should enable developer choice in tools, languages and runtimes.

A Warning from CEET in Australia ■

“Cloud computing might be more accurately described as 'sky computing,' with many isolated clouds of services which IT customers must plug into individually. ... the idea of loosely coupled services running on an agile, scalable infrastructure should eventually make every enterprise in the cloud. It's a long-running trend with a far-out horizon. ... trends, cloud computing is the hardest.” Gruman & Knorr, Infoworld

**Outlook: partly cloudy with
sunny spells to follow**

G. Vossen: Breathing in the Clouds

“Wilber is probably taking this Cloud computing too seriously.”
